

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application.

1. (Amended) A method for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of users, the method comprising:

using a toolbar associated with a Web browser, the toolbar having one or more indicators of Web-based information type;

selecting ~~a set of~~ the Web-based information on a Web page viewable in the Web browser;

selecting the type indicator corresponding to the type of the Web-based information;

creating a transfer request that includes at least the ~~set of~~ Web-based information and an address for a server associated with the personal information management system and in communication with the network, such request being created in response to selecting the type indicator;

sending the transfer request to the server, the server having access to the calendar and contact data for the set of users; and

storing the ~~set of~~ Web-based information at the server, the ~~set of~~ Web-based information associated with at least one user in the set of users,

wherein the Web browser remains at the Web page containing the Web-based information.

2. (Original) A method according to claim 1, wherein the transfer request is a hypertext transfer protocol request.
3. (Amended) A method according to claim 1, wherein the ~~set of~~ Web-based information is stored in a database in communication with the server.
4. (Original) A method according to claim 1, wherein the network is the Internet.
5. (Amended) A method according to claim ~~1~~ 21, wherein the ~~set of~~ Web-based information is contact information and the ~~set of~~ Web-based information is stored with the contact data for the at least one user.
6. (Amended) A method according to claim ~~1~~ 22, wherein the ~~set of~~ Web-based information is event information and the ~~set of~~ Web-based information is stored with the calendar data for the at least one user.
7. (Cancelled)
8. (Amended) The method according to claim ~~7~~ 1, further including sending a response from the server to the Web browser to indicate that the ~~set of~~ Web-based information has been transferred to the personal information management system.
9. (Amended) A method according to claim ~~7~~ 1, wherein the ~~set of~~ Web-based information is selected by highlighting information displayed by the Web browser.
10. (Cancelled)
11. (Amended) A system for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of

users, the system comprising:

a toolbar inserted into a Web browser, the Web browser for searching for and displaying Web-based information with an information type, where a user from the set of users locates and selects ~~a set of~~ the Web-based information from information displayed by the Web-browser;

~~a link~~ an indicator of the information type, included in the toolbar, the indicator including the a link creating a transfer request including at least the ~~set of~~ Web-based information selected by the user, the transfer request directing the ~~set of~~ Web-based information to the personal information management system when the ~~link~~ indicator is selected by the user; and

at least one server, coupled to the network, to receive the transfer request and store the ~~set of~~ Web-based information, the set of Web-based information associated with the user.

12. (Original) A system according to claim 11, wherein the transfer request is a hypertext transfer protocol request.

13. (Original) A system according to claim 11, wherein the Web-based information is stored in a database in communication with the at least one server.

14. (Amended) A system according to claim 11, wherein the ~~set of~~ Web-based information is contact information and the set of Web-based information is stored with the contact data for the user.

15. (Amended) A system according to claim 11, wherein the ~~set of~~ Web-based information is an event and the ~~set of~~ Web-based information is stored with the calendar data for the user.

16. (Amended) A system according to claim 11, wherein the ~~set of~~ Web-based information is selected by highlighting information displayed by the browser.

17. (Amended) A computer program product for use on a computer system for transferring Web-based information having an information type over a network to a personal information management system having calendar and contact data for a set of users, the computer program product comprising a computer useable medium having computer readable code thereon, the computer readable program code including:

program code for selecting a ~~set of~~ the Web-based information;

program code for creating a transfer request, in response to a selection of the information type, that includes at least the ~~set of~~ Web-based information and an address for a server associated with the personal information management system;

program code for sending the transfer request to the server, the server having access to the calendar and contact data for the set of users; and

program code for storing the ~~set of~~ Web-based information at the server, the ~~set of~~ Web-based information associated with at least one user in the set of users.

18. (Original) A computer program product according to claim 17, wherein the

transfer request is a hypertext transfer protocol request.

19. (Amended) A computer program product according to claim 17, wherein the ~~set of~~ Web-based information is contact information of contact information type and the ~~set of~~ Web-based information is stored with the contact data for the at least one user.

20. (Amended) A computer program product according to claim 17, wherein the ~~set of~~ Web-based information is an event of calendar information type and the ~~set of~~ Web-based information is stored with the calendar data for the at least one user.

21. (New) A method according to claim 1, wherein selecting the type indicator includes selecting a contact indicator.

22. (New) A method according to claim 1, wherein selecting the type indicator includes selecting a calendar indicator.

23. (New) The method of claim 8, further including presenting a confirming indicator on the toolbar, the confirming indicator confirming transfer of Web-based information to the personal information management system.

24. (New) A method for transferring Web-based information to a personal information management system having calendar and contact data, the method comprising:

using a toolbar associated with a Web browser, the toolbar having one or more indicators of Web-based information type;

selecting the Web-based information on a Web page viewable in the Web browser;

selecting the type indicator corresponding to the type of the Web-based information;

creating a transfer request to send the Web-based information to storage associated with the personal information management system, such request being created in response to selecting the type indicator;

sending the transfer request to the storage for the personal information management system; and

storing the Web-based information in the storage for the personal information management system,

wherein the Web browser remains at the Web page containing the Web-based information.

25. (New) A method according to claim 24, wherein selecting the type indicator includes selecting among a contact indicator and a calendar indicator.

26. (New) A method according to claim 24, wherein the Web-based information is contact information and selecting the type indicator includes selecting a contact indicator.

27. (New) A method according to claim 26, wherein the Web-based information is caused to be stored with the contact data in the storage.

28. (New) A method according to claim 24, wherein the Web-based information is event information and selecting the type indicator includes selecting a calendar indicator.

29. (New) A method according to claim 28, wherein the Web-based information is caused to be stored with the calendar data in the storage.

30. (New) The method according to claim 24, further including issuing a response to indicate that the Web-based information has been transferred to the personal information management system.

31. (New) The method of claim 30, further including presenting a confirming indicator on the toolbar, the confirming indicator confirming transfer of Web-based information to the personal information management system.

32. (New) A method according to claim 24, wherein the Web-based information is selected by highlighting information displayed by the Web browser.
